

## overview

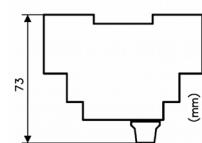

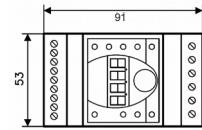

### Terminals

- A. Current transformer input [In=14A].
- B. Outside temperature sensor input.
- C. Lighting control input (on/off and RGB).
- D. Filtration control input.
- E. Auxiliary relay output.
- F. Lighting supply output.
- G. Pump supply output.
- H. Power supply 230V input.

### Pilot lights

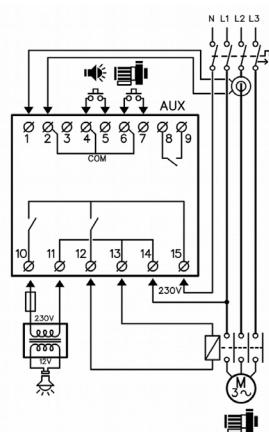

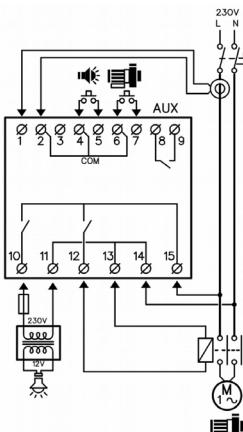

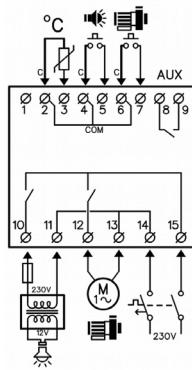

- 1. Filtration program 1.
- 2. Filtration program 2.
- 3. Filtration ON.
- 4. Lighting program.
- 5. Auxiliary relay.
- 6. Current time.
- 7. Alarm / Calibration.

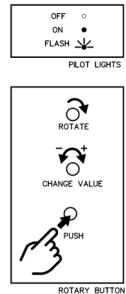

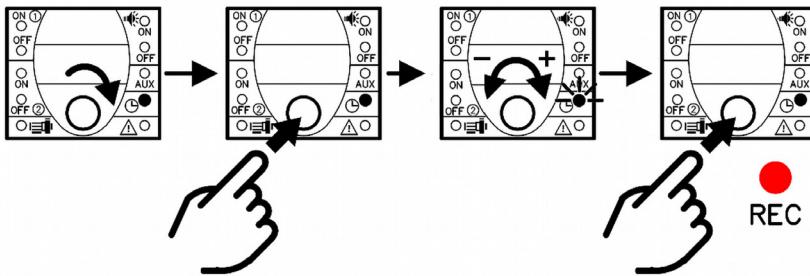

## specifications

<b>Power supply</b>	230/400Vac - 50/60Hz
<b>Pilot lights (LED)</b>	Filtration ON, Alarm, Time programmers, Auxiliary output, Current time
<b>Protections</b>	Overload, Underload, Phase loss (three-phase pumps only)
<b>Overload protection</b>	10% over calibration test measured current
<b>Underload protection</b>	20% under calibration test measured current
<b>Displayed information (4-digit LED display)</b>	Current time, Time programmings, Alarms, Settings
<b>Pump output</b>	14A maximum (up to 20A with external contactor)
<b>Lighting output</b>	230V / 5A maximum
<b>Auxiliary relay</b>	Voltage-free (250V / 5A maximum)
<b>Minimum pump current</b>	0.6A
<b>Maximum terminal cross-section</b>	4mm <sup>2</sup> [power] / 2,5mm <sup>2</sup> [control]
<b>Width/Weight/IP/Temperature</b>	3 modules (52,5mm) / 240g / IP20 / -10°...+55°C, compatible with modular boxes
<b>Options</b>	Bluetooth interface, Radio remote control, Outside temperature sensor

## connection diagrams

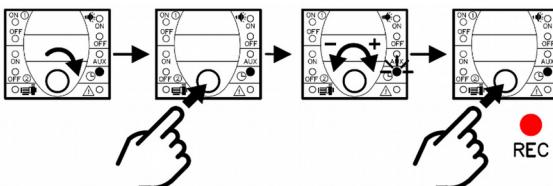

# menu selection

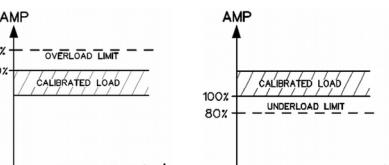

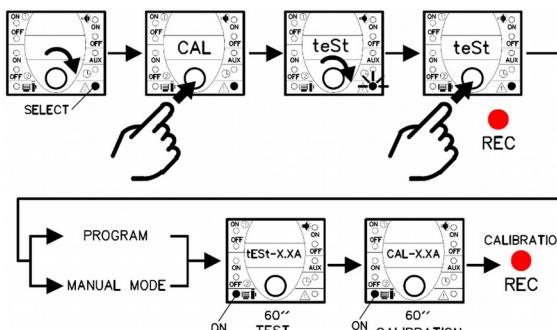

## quick start (4 steps)

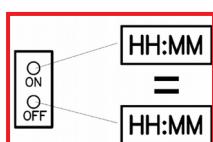

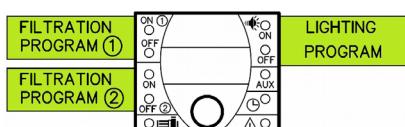

step 1: current time

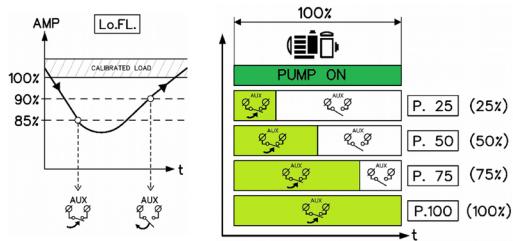

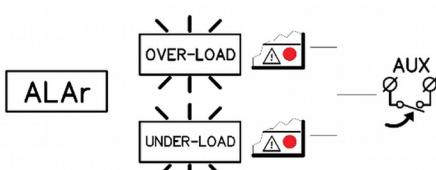

step 2: calibration test

step 3: filtration and lighting programs

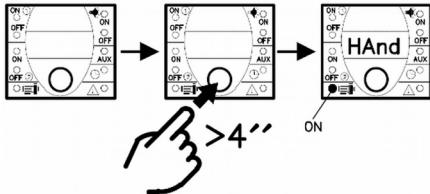

step 4: auxiliary relay (optional use)

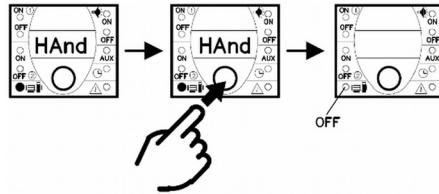

## filtration control

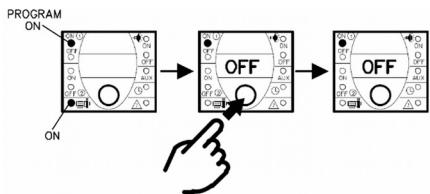

set manual mode

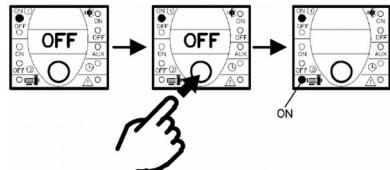

cancel manual mode

set filtration OFF mode

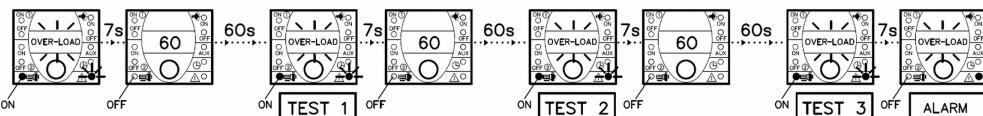

cancel filtration OFF mode

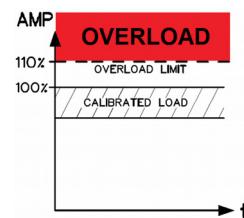

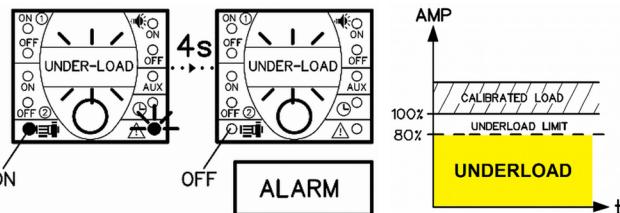

## pump protection

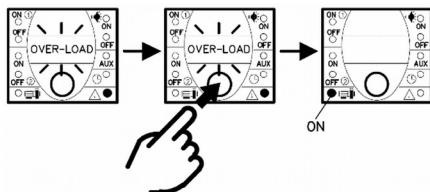

overload

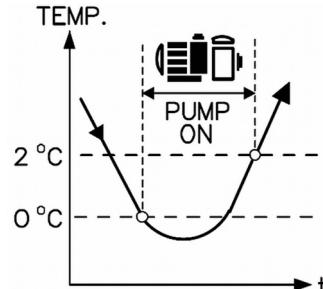

underload

reset

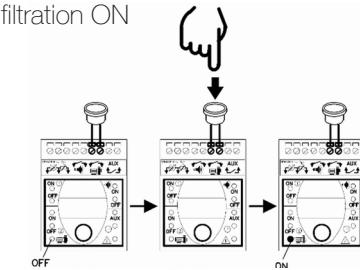

freeze protection

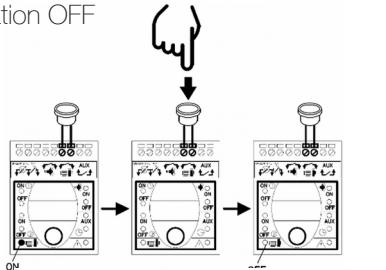

## external control

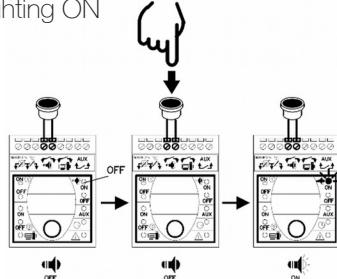

filtration ON

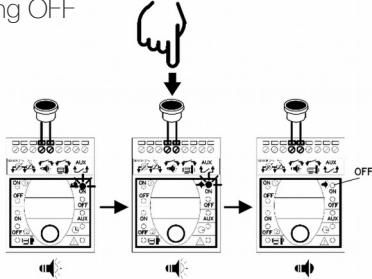

filtration OFF

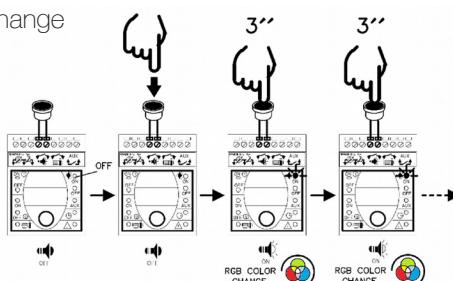

lighting ON

lighting OFF

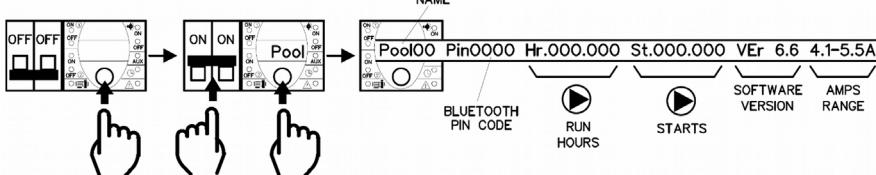

lighting - RGB color change

## Bluetooth

status

new name and PIN
